

Focus on Publishing software runs on MACs

Focus on Publishing Software brings you advanced Accounting modules, integrated with modules for Royalties, Rights, Marketing, Cataloguing, ONIX bibliography, EDI, Batch.co.uk support, Production and scheduling, Stock/Consignment control and Job Costing.

Focus on Publishing is a client-server system. Your database is held externally on the SQL Server database platform. Focus accesses your data by establishing a TCP/IP connection to SQL Server on the default port.

[Parallel Desktop for Mac](#) lets you run Windows applications such as Focus on Publishing software and SQL Server database on a Macintosh computer.

Any Macintosh computer running Mac OS X v10.2.8 or later, with Parallel Desktop and Windows installed, can be used as workstation to connect to data hosted on your network-enabled SQL server, installed on a MAC server (with Parallel Desktop and Windows installed), or PC server, with no reduction in speed.

Client/Workstation Requirements

- **MAC OS:** X v10.2.8 or later
- **Parallel Desktop for Mac**
- **Windows XP, Vista, 7**
- **Memory:** 2GB minimum. Server: 4 GB or more recommended
- **Network :** Gigabyte network recommended
- **Other Requirements:** Focus on Publishing further requires Microsoft Internet Explorer 8 and Microsoft Office 2000 or later

Server Requirements

- **MAC Server OS:** X v10.2.8 or later, with Parallel Desktop
- **Or PC Server**
- **Windows XP, 2003 Server, Vista, 7**
- **SQL Server:** SQL Server 7.0, 2000, 2005 or 2008 (Express) (R2)
- **Memory:** 2GB minimum. Server: 4 GB or more recommended
- **Network :** Gigabyte network recommended
- **Backup devices:** Any suitable backup plan
- **Other Requirements:** Focus on Publishing further requires Microsoft Internet Explorer 8 and Microsoft Office 2000 or later
